stack-levels — zsh

Same AI. Why their code ships and yours breaks.

4 habits + the checklist

same prompt, different dev

step-01.sh

THE REASON

AI amplifies you

> AI copies how you work.
Good habits get faster.
So do bad ones.
4 habits from my checklist:

step-02.sh

HABIT 01 / 04

Prompt first → spec first

> A vague prompt gets a guess.
Write what done looks like.
Inputs, outputs, edge cases.
Then check what comes back.

step-03.sh

HABIT 02 / 04

Accept all → read the diff

> Every line is yours to own.
Read each change before merge.
Ask why for anything odd.
Then prove it works.

step-04.sh

HABIT 03 / 04

“Looks right” → test it

```
> Looking right isn't working.
Run it with real data.
Try the empty and huge cases.
Watch what fails quietly.
```

step-05.sh

HABIT 04 / 04

Re-prompt → know why

> Re-prompting hides the bug.
Read the error. Find the cause.
Fix the cause, not the symptom.
That's the skill AI can't fake.

Same AI.
Better habits.

Comment REVIEW and I'll DM you the AI Code Review Checklist: 12 checks before you merge AI code.
