stack-levels — zsh

Why your launch got likes but zero users

and how to fix that

4 swaps + the checklist

step-01.sh

THE REASON

You showed up once

> Launch day gets attention.
Then the feed moves on.
Users come from what's next.
4 swaps from my Show-Up List:

step-02.sh

SWAP 01 / 04

Post once → post daily

> One launch post is one shot.
Post daily: 30 shots a month.
Each shows you what lands.
But posting isn't enough.

step-03.sh

SWAP 02 / 04

Talk about it → talk to them

> Your feed reaches followers.
Buyers talk in other threads.
Ask how they solve it today.
Then answer where they ask.

step-04.sh

SWAP 03 / 04

Build quietly → build in public

> Quiet builds launch cold.
Share the work as you go.
People follow a story first.
And a story needs proof.

step-05.sh

SWAP 04 / 04

Hope → track

> Ask users where they found you.
Do more of what brought them.
Drop what didn't.
That's distribution as a habit.

You built it. Keep showing up.

Comment USERS and I'll DM you the Show-Up List: my full checklist, step by step.
