stack-levels — zsh

Your daily distribution routine, in 4 moves

You shipped it fast. Find buyers faster.

```
4 moves
```

step-01.sh

THE REASON

Buyers don’t wait for your launch

> They ask for tools in public, every day.
A launch only catches one of those days.
A routine catches the rest.
Move 1 starts with a free phrase list.

step-02.sh

MOVE 01 / 04

Search one buyer phrase

> Pick one: "any tool for..." or "alternatives to..."
Add the problem your app solves.
Search it where your buyers post.
Then read what comes back.

step-03.sh

MOVE 02 / 04

Save the fresh threads

> Skip anything old
or already answered.
Keep the posts where
someone still asks.
Those are today's buyers.
Next: say something useful.

step-04.sh

MOVE 03 / 04

Reply to one

> One good reply beats
ten rushed ones.
Help with the exact
problem they named.
Say you built a tool
if you mention it.
Then keep what they said.

step-05.sh

MOVE 04 / 04

Write down their words

> Copy the exact phrase
they used.
That's your next search.
And the opening line
of your next post.
Tomorrow, start again
at move 1.

You built it. Now what, daily?

Comment SIGNALS and I'll DM you the Buyer Signal Phrase List: the phrases to search in move 1.
